

Java Data Input Using Scanner

02 June 2026 20:31

Input and Output in Java

To take data input in Java using keyboard, we use different class of Java. One of the most used class is Scanner class.

What is class in Java?

Scanner class is pre-defined class in Java.

Scanner class is defined inside java.util package.

Therefore, we need to import java.util package in our class to use Scanner class methods in our program to take user input using keyboard.

```
package Chapter0;  
import java.util.*;
```

```
/**  
 * Write a description of class DataInput here.  
 *  
 * @author (your name)  
 * @version (a version number or a date)  
 */  
public class DataInput  
{  
    public static void main(String[] args){  
        boolean b;  
        byte bt;  
        short s;  
        int i;  
        long l;  
        float f;  
        double d;  
        char c;
```

```

String str;

Scanner sc = new Scanner(System.in);
System.out.print("\nEnter boolean value(true/false): ");
b = sc.nextBoolean();
System.out.print("\nEnter any byte value: ");
bt = sc.nextByte();
System.out.print("\nEnter any short integer value: ");
s = sc.nextShort();
System.out.print("\nEnter integer value: ");
i = sc.nextInt();
System.out.print("\nEnter long integer value: ");
l = sc.nextLong();
System.out.print("\nEnter float value: ");
f = sc.nextFloat();
System.out.print("\nEnter double value: ");
d = sc.nextDouble();
System.out.print("\nEnter a single character: ");
c = sc.next().charAt(0);
sc.nextLine(); //remove keyboard buffer
System.out.print("\nEnter any String: ");
str = sc.nextLine();
System.out.print("\n b = " + b +
                "\n bt = " + bt +
                "\n s = " + s +
                "\n i = " + i +
                "\n l = " + l +
                "\n f = " + f +
                "\n d = " + d +
                "\n c = " + c +
                "\n str = " + str);
    }
}

```

Output:

Enter boolean value(true/false): false

Enter any byte value: 45

Enter any short integer value: 4546

Enter integer value: 3546781

Enter long integer value: 32456789765431987

Enter float value: 0.567876543

Enter double value: 1.32345678976543231

Enter a single character: Y

Enter any String: this is fun

```
b = false
```

```
bt = 45
```

```
s = 4546
```

```
i = 3546781
```

```
l = 32456789765431987
```

```
f = 0.5678765
```

```
d = 1.3234567897654324
```

```
c = Y
```

```
str = this is fun
```
