

Java Keywords

02 June 2026 20:27

Java keywords are also known as reserved words. Keywords are particular words that act as a key to a code. These are predefined words by Java, so they cannot be used as a variable or object name or class name.

```
package Chapter0;
```

```
/**
 * Write a description of class Keyword here.
 *
 * @author (your name)
 * @version (a version number or a date)
 */
public class Keyword
{
    public static void main(String[] args){
        int num = 10;
        if (num > 5){
            System.out.print("\nNumber is greater than 5");
        }
    }
}
```

all highlighted words are 'keywords' in Java.
